

LUMINA

Introducing Lumina 2.0

The AI-powered workspace that adapts to how your team actually works — faster, smarter, and radically simpler.

Uptime SLA (12 mo.)

\$0

Migration fee to 2.0

Lumina 2.0

What's New

Three breakthrough features, built on two years of customer feedback.

Adaptive Canvas

Feature 01

A workspace that **restructures itself** based on your current task — automatically surfaces the right tools, docs, and collaborators at the right moment.

- AI detects task context from Slack, Jira, and Linear signals
- Layout morphs between focus, review, and planning modes
- Avg. context-switch time reduced from **4.2 min** → **38 sec**
- Works across 80+ native integrations

HOW IT WORKS

Observe → reads intent from commit messages, tickets, and calendar

Predict → surfaces relevant context before you search

Adapt → reshapes the workspace in under 200 ms

Beta user verdict

"It felt like the app read my mind." — Priya S., Eng Lead @ Stripe

Lumina Intelligence

Feature 02

Smart Summaries

One-click catch-up on any project: meeting notes, PR threads, and Slack channels distilled to a 60-second read. Accuracy rated 4.6 / 5 by beta users.

Dependency Radar

Auto-detects blockers across tasks and people. Surfaces risks 3–5 days before they become critical. Powered by graph ML trained on 8M project histories.

Draft Assist

Generates first-draft specs, OKRs, and retrospectives from your team's own vocabulary. Reduces doc-writing time by an average of **62%**.

 All AI processing is zero-retention, SOC 2 Type II certified, and GDPR-compliant. Your data never trains our models.

Realtime Co-Pilot

Feature 03

A persistent AI teammate that joins every session — syncs with your toolchain, speaks in your team's terminology, and provides **contextual nudges** without interrupting flow.

- Runs inside Lumina, Figma, VS Code, and Notion simultaneously
- Learns team norms within **7 days** of use
- Offers proactive suggestions: "This ticket matches 3 past incidents"
- Fully configurable — choose verbosity, tone, and trigger conditions

87%

Teams kept Co-Pilot on after trial

-41%

Reduction in missed deadlines

4.8★

Beta rating (n = 2,300 users)

Before Lumina 2.0 vs. After

✕ BEFORE — LUMINA 1.X

- Manual context switching between 6–9 tools per day
- Status updates written by hand every Friday
- Blockers discovered during standups — often too late
- Onboarding new hires takes 3–4 weeks to reach full speed
- AI features limited to basic search and keyword tagging
- Single-region hosting; limited EU data residency options

✓ AFTER — LUMINA 2.0

- Adaptive Canvas surfaces the right tools automatically
- Smart Summaries auto-generate updates in real time
- Dependency Radar flags risks **3–5 days early**
- New hires reach full speed in under **8 days**
- Full Intelligence suite: summaries, radar, draft assist
- Multi-region: US, EU, APAC with per-team residency controls

What Comes Next

✓ Q1 2026 — Foundation

Rebuilt core engine (Rust), new data pipeline, SOC 2 Type II certification, 99.95% uptime SLA

✓ Q2 2026 — Intelligence Beta

Lumina Intelligence shipped to 2,300 beta users; Co-Pilot private preview with 150 design partners

⦿ Q3 2026 — Lumina 2.0 GA Now

General availability, free migration for all 1.x teams, mobile apps (iOS + Android), 80+ integrations

○ Q4 2026 — Enterprise + API

Lumina API for custom integrations, SSO federation, audit logs, and a self-hosted enterprise tier

○ H1 2027 — Platform Expansion

Third-party Co-Pilot skills marketplace, multi-workspace federation, and Lumina for Education
